

## SCHUYLKILL COUNTY CHNA REPORT

Lehigh Valley Health Network (LVHN) is pleased to present our 2022 Community Health Needs Assessment (CHNA) Health Profiles. This report includes data and information about Schuylkill Country and defines "community" as all residents living within the county. Within the communities LVHN serves, the CHNA reports place a greater emphasis on individuals who are experiencing health disparities or who are at risk for negative health outcomes as a result of social and environmental factors influencing their health.

The CHNA Health Profile examines factors that impact the health and wellness of the community. This includes social and environmental factors such as employment, education and air quality; individual behaviors like smoking or healthy eating; and the quality and availability of health care in the area. It includes secondary data from publicly available state and local sources such as the Centers for Disease Control and the Census Bureau. This data is used to identify the top health and social needs in our community and is then validated through community meetings and interviews with residents (primary data). When taken together, this serves as an important overview of the current state of health in our region and identifies potential areas of concern that Lehigh Valley Health Network can work to address.

The 2022 LVHN CHNA Health Profile is broken out into a number of subsections, including Demographics, Social and Economic Factors, Health Behaviors, and Health Outcomes. In addition, two types of call-out boxes are incorporated throughout the report. The first summarizes data presented on that page, providing easy-to-read summary statements. The second highlights findings from the community meetings and interviews.

Information in this Health Profile will be used to develop a three-year Implementation Plan, which outlines LVHN's plan to address the needs identified. The 2022 Implementation Plan will be shared soon after the Health Profiles are released.

## HEALTH INDICES

## AREA DEPRIVATION INDEX

This indicator reports the average (population weighted) area deprivation index (ADI) for the selected area. The ADI is a metric used to rank neighborhoods by socioeconomic status disadvantage in a region of interest (e.g., at the state or national level). ADI scores range from 1 to 100 , with 1 representing the least disadvantaged areas.

## SOCIAL VULNERABILITY INDEX

The degree to which a community exhibits certain social conditions, including high poverty, low percentage of vehicle access, or crowded households, may affect that community's ability to prevent human suffering and financial loss in the event of disaster. These factors describe a community's social vulnerability.

The social vulnerability index is a measure of the degree of social vulnerability in counties and neighborhoods across the United States, where a higher score indicates higher vulnerability. Schuylkill County has a social vulnerability index score of 0.45 , which is greater than the state average of 0.41 .

## INCOME - INEQUALITY (GINI INDEX)

This indicator reports income inequality using the Gini coefficient. Gini index values range between zero and one. A value of one indicates perfect inequality where only one household has any income. A value of zero indicates perfect equality, where all households have equal income. Index values are acquired from the 2015-19 American Community Survey and are not available for custom report areas or multi-county areas.

## INCOME - MEDIAN HOUSEHOLD INCOME

This indicator reports median household income based on the latest five-year American Community Survey estimates. This includes the income of the householder and all other individuals age 15 and older in the household, whether they are related to the householder or not. Because many households consist of only one person, average household income is usually less than average family income. There are 58,749 households in the report area, with an average income of $\$ 65,564$ and median income of $\$ 52,280$.

## POVERTY - CHILDREN BELOW 100\% FPL

Poverty is considered a key driver of health status.
In the report area, $16.56 \%$ or 4,603 children age 0-17 are living in households with income below the federal poverty level (FPL).
This indicator is relevant because poverty creates barriers to access, including health services, healthy food, and other necessities that contribute to poor health status.

## POVERTY - CHILDREN ELIGIBLE FOR FREE/REDUCED PRICE LUNCH

Free or reduced price lunches are served to qualifying students in families with income between under 185\% (reduced price) or under $130 \%$ (free lunch) of the U.S. federal poverty threshold as part of the federal National School Lunch Program (NSLP). Out of 18,166 total public school students in the report area, 10,260 were eligible for the free or reduced price lunch program in the latest report year. This represents $56.5 \%$ of public school students, which is higher than the state average of $50.9 \%$.

## EDUCATION

This category contains indicators that describe the education system and the educational outcomes of report area populations. Education metrics can be used to describe variation in population access, proficiency, and attainment throughout the education system, from access to pre-kindergarten through advanced degree attainment. These indicators are important because education is closely tied to health outcomes and economic opportunity.

## ACCESS - PRESCHOOL ENROLLMENT (AGE 3-4)

This indicator reports the percentage of the population age 3-4 that is enrolled in school. This indicator helps identify places where preschool opportunities are either abundant or lacking in the educational system.

## ATTAINMENT - BACHELOR'S DEGREE OR HIGHER

## ATTAINMENT - HIGH SCHOOL GRADUATION RATE

The adjusted cohort graduation rate (ACGR) is a graduation metric that follows a "cohort" of first-time ninth graders in a particular school year, and adjusts this number by adding any students who transfer into the cohort after ninth grade and subtracting any students who transfer out, emigrate to another country, or pass away. The ACGR is the percentage of the students in this cohort who graduate within four years. In the report area, the adjusted cohort graduation rate was $87.9 \%$ during the most recently reported school year. Students in the report area performed worse than the state, which had an ACGR of $88.3 \%$.

## High School Graduation Rate by Student Race and Ethnicity

The table and chart below display local, state, and national variation in cohort graduation rates by student race and ethnicity.
Note: Data are suppressed for some school districts for population groups when the "universe" population falls below a certain threshold. County, state, and national summaries are aggregates of district level data and may not represent all students when suppression has occurred.

 Community members and leaders in Schuylkill County discussed the importance of early learning for later school success, but many participants shared that there are many barriers to accessing preschool services. For many families, preschool is unaffordable. There are wait lists for good, safe preschools and a lack of resources and transportation in many school districts. In addition, some participants reported a lack of connecting families with services in the early years.

## Attainment - Overview

Educational attainment shows the distribution of the highest level of education achieved in the report area, and helps schools and businesses to understand the needs of adults, whether it be workforce training or the ability to develop science, technology, engineering, and mathematics opportunities. Educational attainment is calculated for persons over age 25, and is an estimated average for the period from 2014 to 2019. For the selected area, $11.2 \%$ have at least a college bachelor's degree, while $46.6 \%$ stopped their formal educational attainment after high school.

## HOUSEHOLDS - OVERVIEW

This indicator reports the total number and percentage of households by composition (married couple family, nonfamily, etc.). According to the American Community Survey subject definitions, a family household is any housing unit in which the householder is living with one or more individuals related to him or her by birth, marriage, or adoption.* A non-family household is any household occupied by the householder alone, or by the householder and one or more unrelated individuals.

Family households and married-couple families do not include same-sex married couples, even if the marriage was performed in a state issuing marriage certificates for same-sex couples. Same-sex couple households are included in the family households category if there is at least one additional person related to the householder by birth or adoption.

## EVICTIONS

This indicator reports information about formal evictions based on court records from 48 states and the District of Columbia, compiled by the Eviction Lab. The number of evictions and eviction filings within the report area is shown below. The "filing rate" is the ratio of the number of evictions filed in an area over the number of renter-occupied homes in that area. An "eviction rate" is the subset of those homes that received an eviction judgment in which renters were ordered to leave. For the year 2016, the Eviction Lab reports that, of 16,015 homes in the report area, there were 472 eviction filings, for an eviction filing rate of $2.95 \%$. 250 of the eviction filings ended in an eviction, for an eviction rate of $1.56 \%$.

Note: Not all counties have data that has been provided. Indicator data do not include information about "informal evictions," or those that happen outside of the courtroom.

## Eviction Filing Rate by Neighborhood Predominant Race/Ethnicity, 2016

Rates by race/ethnicity are calculated by aggregating data on evictions in census block groups with a majority of the population (over $50 \%$ ) belonging to a specific race/ethnicity. Reported race/ethnicity categories include: Non-Hispanic white; Black or African American; Asian, and Hispanic or Latino. In some counties there are no majority Black, Asian, or Hispanic census block groups.

Note: Not all counties or states have data that has been provided.

$27.39 \%$ of all households in Schuylkill County live in cost-burdened households, and over half of cost-burdened homes are rental household.
 Participants in community meetings and interviews reported that it can be a challenge to find decent housing, which impacts health and the ability to get around. There are many old or dilapidated properties, which leads to health issues like allergies and asthma. Remediation expenses for lead, radon, mold, and asbestos to make older homes safe can be very expensive.

## Cost-Burdened Households Within Tenure Type

These data show the percentage of households by tenure that are cost burdened. Cost-burdened rental households (those that spent more than $30 \%$ of the household income on rental costs) represented $42.13 \%$ of all of the rental households in the report area, according to the U.S. Census Bureau American Community Survey (ACS) 2015-2019 five-year estimates. The data for this indicator is only reported for households where tenure, household housing costs, and income earned were identified in the American Community Survey.

The most frequent barrier to health mentioned by community members and leaders was the lack of consistent access to health care services throughout the county. Participants called for a greater presence of health care services in the community, including through satellite sites, mobile units, pop-up clinics, and in-school services. In addition, preventive screenings and preventive services should be offered more widely, particularly in low-income
communities.
Participants also suggested a number of other ways the health care systems could play a role in supporting health in the community. Limited broadband access prevents widespread use of technology such as telehealth and online registration. During the COVID-19 pandemic, these technological tools became more critical, but the older population in Schuylkill County struggles to utilize them. Health care systems can continue to find ways to increase access through technology as well as utilize retired or trusted health care professionals to provide health education and information in the community.

## CLINICAL CARE AND PREVENTION

A lack of access to care presents barriers to good health. Supply of facilities and physicians, the rate of uninsurance, financial hardship, transportation barriers, cultural competency, and coverage limitations affect access.
Rates of morbidity, mortality, and emergency hospitalizations can be reduced if community residents access services such as health screenings, routine tests, and vaccinations. Prevention indicators can call attention to a lack of access or knowledge regarding one or more health issues and can inform program interventions.

## CANCER SCREENING - MAMMOGRAM (MEDICARE)

This indicator reports the percentage of female Medicare beneficiaries age 35 and older who had a mammogram in most recent reporting year. The American Cancer Society recommends that women age 45 to 54 should get a mammogram every year, and women age 55 and older should get a mammogram every other year. In the latest reporting period, there were 22,923 Medicare beneficiaries in the report area, and $27 \%$ of female beneficiaries age 35 or older had a mammogram in the past year. The rate in the report area was lower than the state rate of $34 \%$ during the same time period.

## DIABETES MANAGEMENT - HEMOGLOBIN A1c TEST

This indicator reports the percentage of Medicare patients with diabetes who have had a hemoglobin A1c (hA1c) test, a blood test that measures blood sugar levels, administered by a health care professional in the past year. In the report area, 3,140 Medicare enrollees with diabetes have had an annual exam out of 1,924 Medicare enrollees in the report area with diabetes, or $87.4 \%$. This indicator is relevant because engaging in preventive behaviors allows for early detection and treatment of health problems. This indicator also can highlight a lack of access to preventive care, a lack of health knowledge, insufficient provider outreach, and/or social barriers preventing utilization of services.

Participants in com munity meetings and interviews shared that they have noticed an increase in people who are managing diabetes. Diabetes impacts quality of life of residents and is a financial strain due to the cost of diabetes treatments. Community members suggested that there be a greater focus on health education around diabetes and other prevention efforts.

Participants in community meetings and interviews expressed concern over the widespread use of drugs and alcohol in the county. Many people know someone struggling with drug and alcohol abuse, and community members acknowledged that drinking is a part of the generational culture in the county. They also identified that many community members lack coping and stress management skills, which adds to mental health and substance abuse concerns. Participants suggested creating a greater awareness of resources in the county to address mental health and substance abuse as well as additional prevention services, including in the schools.

F$23.2 \%$ of adults in Schuylkill County selfreport no active leisure time.

## HEALTH BEHAVIORS

Health behaviors such as poor diet, a lack of exercise, and substance abuse contribute to poor health status.

## ALCOHOL - HEAVY ALCOHOL CONSUMPTION

In the report area, 29,929 or $21.07 \%$ of adults self-report excessive drinking in the last 30 days, which is greater than the state rate of $20.20 \%$. Data for this indicator are based on survey responses to the 2018 Behavioral Risk Factor Surveillance System (BRFSS) annual survey and are used for the 2021 County Health Rankings.

Excessive drinking is defined as the percentage of the population who report at least one binge drinking episode involving five or more drinks for men and four or more for women over the past 30 days, or heavy drinking involving more than two drinks per day for men and more than one per day for women, over the same time period. Alcohol use is a behavioral health issue that is also a risk factor for a number of negative health outcomes, including: physical injuries related to motor vehicle accidents, stroke, chronic diseases such as heart disease and cancer, and mental health conditions such as depression and suicide.

 Many community members and leaders expressed a concern about the level of physical inactivity and obesity among residents in the county. Participants reported that there are limited opportunities for physical activity, and people tend not to walk places (i.e., sedentary lifestyle). Often programs are offered but then get canceled because of low participation. Participants also recognized that community members are working hard and prioritize care of house and family instead of self. There is a need for more accessible resources including groups, classes, and preventive services in communities.

## HEALTH OUTCOMES

Measuring morbidity and mortality rates allows assessing linkages between social determinants of health and outcomes. By comparing, for example, the prevalence of certain chronic diseases to indicators in other categories (e.g., poor diet and exercise) with outcomes (e.g., high rates of obesity and diabetes), various causal relationships may emerge, allowing a better understanding of how certain community health needs may be addressed.

## POOR OR FAIR HEALTH

This indicator reports the percentage of adults age 18 and older who self-report having poor or fair health (ageadjusted to the 2000 standard). Data are from the 2018 Behavioral Risk Factor Surveillance System (BRFSS) annual survey and are used for the 2021 County Health Rankings. This indicator is relevant because it is a measure of general poor health status.
Within the report area, there are 6,709 persons age 18 and older who self-report having poor or fair health. This represents $19.5 \%$ of the total population age 18 and older, which is greater than the state rate of $17.7 \%$.

## LOW BIRTH WEIGHT

This indicator reports the percentage of live births where the infant weighed less than 2,500 grams (approximately $5 \mathrm{lbs} ., 8$ oz.). These data are reported for a seven-year aggregated time period. Data are from the National Center for Health Statistics - Natality files (2013-2019) and are used for the 2021 County Health Rankings.

Within the report area, there were 9,299 infants born with low birth weight. This represents $8.1 \%$ of the total live births.
Note: Data are suppressed for counties with fewer than 10 low birth weight births in the reporting period.

| Report Area | Total Live Births | Low Birth Weight Births | Low Birth Weight Births, \% |
| :---: | :---: | :---: | :---: |
| Schuylkill County | 9,299 | 749 | $8.1 \%$ |

 infants born with low birth weight. This percentage varies by race and ethnicity with $7.9 \%$ of non-Hispanic white infants born at low birth weight compared to $13.2 \%$ of Black infants and $8.6 \%$ of Hispanic infants.

Participants in community meetings and interviews acknowledged that for those who are struggling with obesity, it leaves them vulnerable to other illnesses as well.

## OBESITY

This indicator reports the number and percentage of adults age 20 and older who self-report having a body mass index (BMI) greater than 30.0 (obese). Respondents were considered obese if their body mass index (BMI) was 30 or greater. Body mass index (weight [kg]/height [m]2) was derived from self-report of height and weight. Excess weight may indicate an unhealthy lifestyle and puts individuals at risk for further health issues.

Within the report area, there are a total of 41,154 adults age 20 and older who self-reported having a BMI greater than 30.0. This represents a $36.7 \%$ of the survey population.

| Report Area | Population Age 20+ | Adults With BMI $>\mathbf{3 0 . 0}$ <br> (Obese) | Adults With BMI > 30.0 <br> (Obese), \% |

## MORTALITY - PREMATURE DEATH

This indicator reports the years of potential life lost (YPLL) before age 75 per 100,000 population for all causes of death. Figures are reported as crude rates, and as rates age-adjusted to year 2000 standard. YPLL measures premature death and is calculated by subtracting the age of death from the 75-year benchmark. Data are from the National Center for Health Statistics - Mortality files (2017-2019) and are used for the 2021 County Health Rankings. This indicator is relevant because a measure of premature death can provide a unique and comprehensive look at overall health status.

Within the report area, there are a total of 2,461 premature deaths. This represents an age-adjusted death rate of 9,758 per every 100,000 total population.
