Women's Breast Health Center

• Conveniently located in the Bartonsville Healthcare Center, the Women’s Breast Health Center is recognized as a “Center of Excellence” by the National Quality Measures for Breast Centers (NQMBC) and has been designated a Breast Imaging Center of Excellence by the American College of Radiology (ACR). This comprehensive breast health center provides superior diagnostic technology in a comfortable, inviting atmosphere.

Diagnostics

Genetic Screening/BRCA and clinical research

• Understanding if breast or ovarian cancer runs in your family is important. Genetic screening – BRCA analysis is for individuals that are at risk for hereditary breast or ovarian cancer. Talk to your healthcare provider to decide if BRCA testing is right for you.

Diagnostic Services

• 3D Digital Mammography
• 3D Breast Ultrasound
• Breast MRI
• Image Guided Breast Biopsies, available same-day
• Radiologists specialized in reading breast imaging

Nurse Navigator

• Breast Health Nurse Navigator services are available at PMC to ensure patients receive timely diagnosis and treatment by eliminating barriers to quality healthcare and connecting patients with resources.

Treatment and Compassionate Care

At the Hughes Cancer Center, you begin with a caring team that is committed to compassion and excellence in patient care. We utilize a multidisciplinary approach to treatment. This means we apply the knowledge of an entire team of cancer experts to the specific needs of each patient, ensuring that every individual receives the most comprehensive and effective treatment possible.

SURGERY

There are several types of breast cancer surgery. Our physicians are specialized from taking out the lump and removing several lymph nodes from under the arm, to removing the breast with or without reconstruction.

MEDICAL ONCOLOGY

Chemotherapy, or chemo, is a type of cancer treatment that uses drugs to destroy cancer cells. It’s often used along with surgery, radiation therapy, or biological therapy.

RADIATION ONCOLOGY

Radiation therapy uses high-energy rays to destroy cancer cells. It may be used after breast cancer surgery to wipe out any cancer cells that remain.

Technology

New Innovations

• Leading-edge digital mammography services deliver fast, accurate results for detecting early stage breast cancer
• Core biopsies used for diagnosis of breast cancer to help avoid open surgical biopsy
• Partial breast radiation technology reduces treatment time for appropriate candidates
• Continual enrolling of patients on clinical trials through our affiliation with the Jefferson Cancer Network

► Clinical trials enable patients to gain access to new treatments that are not available to the general public. These very important trials will someday lead to a cure.

Education & Outreach

Breast cancer survivorship rates are increased in our community by teaching, providing screenings, healing, research and inspiration.

Linda Creed Grants

• Through the generosity of private grants, PMC provides vital breast screenings and breast cancer related services to individuals who are under- or uninsured

Support and Survivorship

• Support Groups
• Pink Light Walk
• Cancer Survivors Day
• Complementary therapy programs
  ➤ acupuncture
  ➤ massage therapy
  ➤ art
  ➤ music
